DETAILED ACTION

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Hall [U.S. 6034506].

With respect to claim 1 (Currently Amended), Hall discloses a rechargeable battery [Fig. 4, 11] which includes a plurality of connected cells [col. 3 lines 35-44], each of which includes an overcurrent protecting element connected to the cell in series [Fig. 3, switch Sc, in combination with the 5-cell charging configuration shown] comprising: a pair of first electrodes configured to extract electric power from the battery [col. 3 lines 49-55; Fig. 3]; and a pair of second electrodes which is different from said pair of first electrodes and is configured to charge and discharge each of said plurality of cells individually [col. 3 lines 5-12; Fig. 3] through the overcurrent protecting element [col. 3 lines 20-25]; and a switch [Fig. 3, Sb] configured to series connect said plurality of cells without the overcurrent protecting elements [switch Sc and the 5-cell configuration is used to solve the issues associated with high current charging- col. 3 lines 20-44; note that in the "discharge configuration" of Fig. 3 that switch Sc and the 5-cell configuration is *not used*] when the battery is not attached [Fig. 3, with SX1 open the battery is not electrically attached to DC-DC supply 12, and is in the "discharge configuration" shown]

to a charger [Fig. 2, 15] such that electric power can be extracted from the series-connected plurality of cells through said pair of first electrodes [Fig. 3, series discharge configuration; col. 3 lines 62-67], and configured to electrically separate said plurality of cells from one another when the battery is attached to the charger [Fig. 3, with SX1 closed the battery is electrically attached to DC-DC supply 12 and is in the "charge configuration" shown] such that each of said plurality of cells can be charged individually by the charger through said pair of second electrodes [Fig. 3, "charge configuration"; col. 3 lines 5-12; col. 4 lines 57-62].

With respect to claim 12 (Previously Presented), Hall discloses that the battery is a battery pack in which said plurality of cells are assembled [Fig. 3, 11; col. 4 lines 47-60].

### ***Response to Arguments***

Applicant's arguments filed 3/9/2009 have been fully considered but they are not persuasive. Applicant's arguments with respect to the amended claims are addressed in the action above.
